

TAYLORŮV POLYNOM

Definice:

Taylorovým polynomem funkce f v bodě a stupně n nazýváme polynom:

$$\text{pro } n=0 \quad T_0(x) = f(a)$$

$$n=1 \quad T_1(x) = f(a) + f'(a)(x-a)$$

Veta o zbytku Taylorova polynomu

Nechť T_n je T.P. funkce f v bodě a stupně n ,
 f má ~~derivaci~~ derivaci až do řádku $(n+1)$ má
body a, x a f je spjata na interval $[a, x]$ ($[x, a]$)

Pod ~~$R_n(x)$~~ existuje bod ξ mezi a, x , že

$$R(x) = ?$$

$$R_n(x) = \frac{1}{n!} f^{(n+1)}(\xi) (x-a)^{n+1}$$

$$(R_1(x) = \frac{1}{2} f''(\xi) (x-a)^2, R_2(x) = \frac{1}{3!} f'''(\xi) (x-a)^3 \dots)$$

Zbytek Taylorova polynomu
(residuus)

↓ aproximovaná hodnota

← aproximovaná hodnota

$$R_n(x) = f(x) - T_n(x)$$

$$R_0(x) = f(x) - f(a)$$

$$R_1(x) = f(x) - f(a) - f'(a)(x-a)$$

Ditas:

pro $n=1$:

~~$$F(x) = R_1(x)$$~~

$$F(t) = R_1(t) - \frac{R_1(x)}{(x-a)^2} (t-a)^2$$

$$a \quad t \in (a, x) \quad x$$

$$R_1(t) = f(t) - f(a) - f'(a)(t-a)$$

$$R_1(x) = f(x) - f(a) - f'(a)(x-a)$$

$$R_1(a) = f(a) - f(a) - f'(a)(a-a) = 0$$

$$F(a) = R_1(a) - \frac{R_1(x)}{(x-a)^2} (a-a)^2 = 0$$

$$F(x) = 0$$

$$t = x$$

$$F'(t) = R_1'(t) - \frac{R_1(x)}{(x-a)^2} \cdot 2(t-a)$$

$$= f'(t) - 0 - f'(a) \cdot 1$$

Polleava neta: leisti c neta a, x :

$$F'(c) = 0 \dots f'(c) - f'(a) \cdot \frac{R_1(x)}{(x-a)^2} \cdot 2(c-a)$$

$$F'(a) = 0$$
